

NovoClinical is a completely secured cloud-based system, eliminating the burden of buying expensive software or hardware. Your practice information is safe and easily expandable and NovoClinical can be implemented quickly, allowing you the ability to take advantage of unprecedented cost savings and process efficiencies almost immediately.

NovoClinical features a modular design and is adaptable to every practice needs. Better yet, NovoClinical is cloud based and intuitive. Your practice can be set up and running in a few hours and in most cases, the staff trained in less than a day. Reports can be modified and customized and features specific to your practice can be added quickly. An EHR should increase your practice efficiency, not add chaos and expense. The cost is affordable and the features are many,

for example:

## ELIGIBILITY

When appointments are made or the patient demographics are added or updated, the insurance company is queried to verify eligibility, co-pay, deductibles and co-insurance.

## CREATE DEMOGRAPHICS

The system verifies the patient's demographic information is consistent with the insurance company. This includes policy number, name spelling and primary policy holder -- avoiding erroneous name matching, dependent information, and more for clean claims out the door.

## MEDICAL HISTORY

The patient's medical history is input and verified either through the patient portal or input by the support staff. The information auto populates for the provider, real time.

## MEDICATIONS

Prescription history is pulled from the national database and populated into the patient charts, again crossing over to the providers charts. No more guessing the patients' medications. Real time information to include date of prescription, dosage and more.

## CERTIFIED

Meaningful Use Level 3 (2015 edition) certified. As a result, the system can generate the appropriate data for CMS reporting to avoid costly fines for being non-compliant.

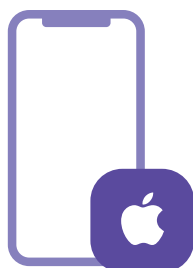

## DICTATION DRIVEN

Because the system is dictation driven (or in those rare cases when the provider prefers to type or select options, either choice is available), when the provider speaks, labs can be ordered, radiology can be ordered, prescriptions can be ordered, billing and coding is generated and more by speaking, not typing. Time is saved.

## CUSTOMIZED REPORT TEMPLATES.

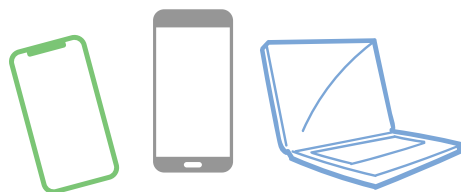

Provider reports are customizable. Fields can be added. Groups can be added. Entire reports can be input, updated and/or modified to accommodate the provider. Along with being able to create custom templates, templates can be created with open text boxes for typing or dictation and in cases when "drop downs" are preferred, these can be added easily.

## IPHONE APP

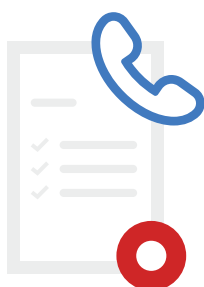

The iPhone app allows providers the ability to chart from their smart phone via standard voice recognition.

## PATIENT PORTAL

From the patient portal, patients can request an appointment, pay their bill, communicate with the staff or providers, request a prescription refill, view their reports, update their demographics, sign required documents, obtain education material and so much more. There is a phone app for both android and IOS specific for the patient portal.

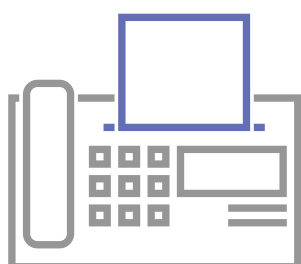

## INTEGRATED PHONE SYSTEM

Patients calls can be made and received directly in the system. This allows calls to be placed, recorded and filed in the patient charts for later use. An integrated phone system reduces communication costs while increasing the efficiency of communicating while increasing productivity.

## TEXTING, EMAIL

In addition to an integrated phone system, communication with other providers, patients, insurance companies and more is done from within the system through an integrated texting and an email (HIPPA COMPLIANT).

## FAXING

As with other communication tools within the system, an integrated faxing process means faxes come directly into the system and can be parsed or mapped to a specific patient. The fax pages can be individually mapped to specific patients. No more fax machines. Also, documents and patient relevant medical records can be selected from within the system and sent to a requesting office. No external fax machines. No more paper!

## CHRONIC CARE MANAGEMENT (CCM)

Chronic Care Management has grown dramatically in recent years because of the benefit to patients. However, some practices find it difficult to accurately track and bill the process. NovoClinical has a built-in care tracking and auto billing process so the focus can be on CCM and care. Not billing processes.

## RPM

As with CCM, Remote Patient Monitoring (RPM) has grown as a new generation has become more tech savvy and patients in remote areas are able to receive care never before thought possible. RPM is built into NovoClinical.

## TASK MANAGER

Keeping track of labs, follow-up processes and more can be a major concern for any practice. NovoClinical has a built in "Task Manager" to help document, track and timestamp critical care processes and assignments. The Task Manager creates alerts and warnings when tasks are overdue, labs aren't back and other critical time related processes. Clinic users can track internal tasks as well using the system. Nothing is lost or forgotten through the use of loose notes, papers and "sticky notes".

## INTERNAL CHATTING

An internal chatting process is featured within NovoClinical. Staff members can communicate with each other, with providers, mid-levels, administrative staff or others easily from within the system.

## ELECTRONIC AND MANUAL LAB ORDER/RESULT

When available, NovoClinical can electronically connect to a number of labs. This allows for electronic ordering and results for labs and other tests. When an electronic connection is not available, convenient connections are set up for manual ordering. Labs are ordered through the built-in faxing process and received by the same process. Once received, labs and other tests received can be easily mapped through the system.

## TELEMEDICINE

Technology and telemedicine have become a convenient way to treat patients. Time save by both the patient and provider. Telemedicine is built and available within NovoClinical. Doctor/Office can setup a video call with patient, and patient can join the video call using the patient specific app(android/iphone/ipad).

## BILLING AND CODING

The system reads the providers assessment and plan for the appropriate ICD 10 and CPT codes and then builds the electronic 1500 (EDI) to be sent to the clearing house. Prior to send, the system allows manual correction and review if necessary. This process speeds up the billing and coding process and allows payments to come back in 3-5 days on average. Revenue is increased, and the claim process time is reduced.

## ELECTRONIC EOB

The primary EOB comes back electronically and immediately searches for a secondary. If present, the system calculates payments, creates the secondary and sends it out. The same auto process applies to the tertiary, if present.

## AUTO APPLY OF EOB

EOBs are received electronically without any human intervention and auto apply to each patient's charts, saving time and creating accuracy. These same EOBs can be viewed, analyzed and if necessary, exceptions can be worked, corrected and resent. All from the same screen.

## ACCOUNTING REPORTS.

A number of accounting reports are available within NovoClinical. Aging reports, summary report, daily, monthly, quarterly and even annual income reports are available. Insurance aging to include age of claim, when the claim was paid and more importantly, claims that are unpaid. Graph charts and other reports are available. Specialty reports can be built as requested.

## ALERTS

Time stamps are included with many financial processes and information. This includes such information as insurance claims and various clinical reports. Time is money for accounting and for patient care, time is critical.

## ON THE CLOUD

Cloud based, providers and staff can access the system anywhere with any computer, a tablet, a desktop.

## WINDOWS OR MAC

Choose your browser. Choose your operating system. It's compatible.

## AVAILABLE SUPPORT

No ticketing system necessary. Support is responsive. Practices can drop an email/chat in within 24 hours have an answer. Most responses are same day.
